 Water Revenue is higher than prior years due to unusually higher temperatures in July and increased rates. 2) Interest Other Fund revenue is higher primarily due to increasing interest rates and a higher account balance.
 CIP expenditures is low with the completion of several projects in FY24. 4) GF-Capital Outlay is higher than prior years due to payment of a purchased vehicle. 5) There are no costs for CIP Bond or CRWSC as those funds have been closed out but will be reported in the 5-year graph.

(as of the end of September 2024)

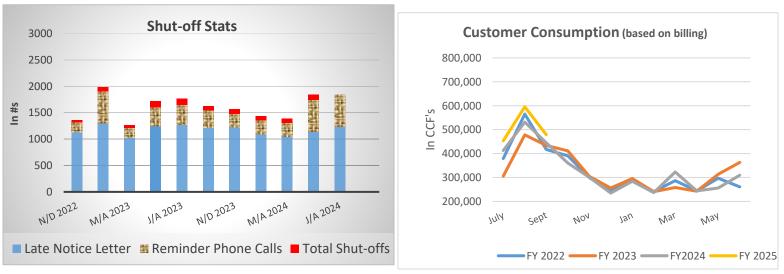

Residential Customers are billed on even months, Commercial Customers are billed on odd months.

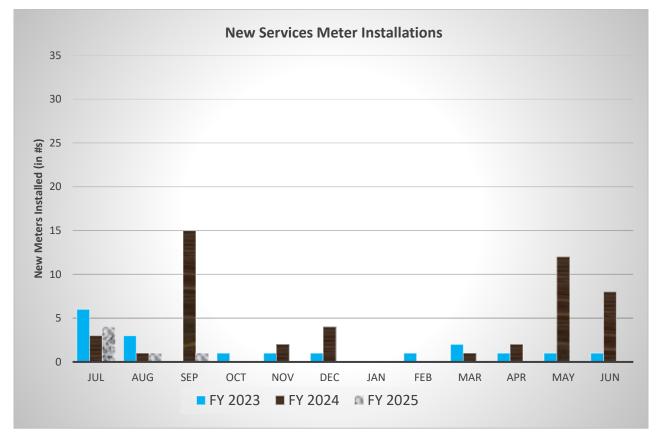

Cash/Check – Received via Lockbox, Counter

Credit Card – Received via CRW Initiated Automatic Payment, Walk-ins/Phone Calls, and Website Electronic Funds Transfer – Received via Bank-to-Bank Transfer, Automatic Checking Withdrawal (RapidPay)

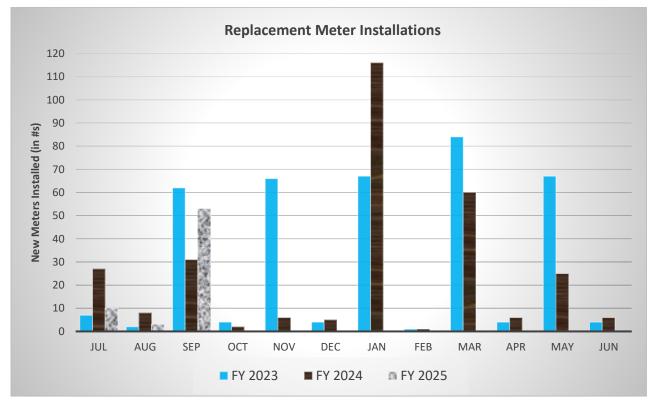

*Reminder Phone Calls are made during the even months. Shut offs occur the following month. **Jan/Feb late notice number is an estimate *No late notices Sept-Dec. '20; reinstated February and sent in May 2021

(as of the end of September 2024)

*March & April 2024 Data includes water purchased from NCCWC during WTP Shutdown

*March & April 2024 Data includes water purchased from NCCWC during WTP Shutdown

Regulatory

All 73 samples collected and analyzed for the September monitoring period showed no presence of coliform/*E. coli* bacteria.

Cyanotoxin Testing

Microcystin and Cylindrospermopsin sampling of our raw water began in May and occurs every two weeks through October for compliance, and the samples are analyzed at our in-house accredited laboratory.

No cyanotoxins have been detected in our raw water.

Non-Regulatory

General water quality parameters (pH, temperature, chlorine, TDS, hardness, alkalinity) were collected throughout the distribution system at 16 locations in the North and South systems.

Monthly watershed sampling was conducted at 4 long-term sampling locations for total organic carbon, nutrients (nitrate/nitrite, total phosphorus, orthophosphate, etc.), coliform density, pH, dissolved oxygen, TDS, and temperature.

Weekly algae monitoring is occurring at 3 locations in the North Fork Reservoir and CRW's intakes. This work includes species monitoring with the FlowCAM and nutrient analysis.

• The current Clackamas River 7-day average streamflow is 78% of normal (median).

• September precipitation in the Clackamas basin was 74% of normal. Precipitation since the beginning of the water year (October 1 – September 30) has been 101% of normal.

• The three-month outlook (Oct-Dec) from the NOAA Climate Prediction Center calls for equal chances of above and below temperatures and a slightly elevated chance of above normal precipitation for Western Oregon.
